Introduction

Real Image Editing with Diffusion Models

• Diffusion models emerge as a powerful generation tool and apply to real image editing

Flower \rightarrow cupcake

Null-text Inversion (Mokady et al. CVPR 2023)

Stable Diffusion (Rombach et al. CVPR 2022)

Introduction

Real Image Editing with Diffusion Models

- 1) Inversion 2) Reconstruction and Editing
- Reconstruction is crucial for precise real image editing

Introduction

Real Image Editing with Diffusion Models

• Naive reconstruction is diverged from the inversion path because of Classifier-Free Guidance (CFG)

Related Work

Inversion with Diffusion Models

- The existing inversion method optimizes the null-text embedding to mitigate divergence
- However, text-embedding is one-dimensional vector \rightarrow hard to preserve spatial context
- Optimization approach \rightarrow time-consuming

Method

Noise Map Guidance (Ours)

- Preserve the spatial context \rightarrow use noise map directly
- Fast editing \rightarrow conditional approach (optimization-free)

Experiments

Global

Noise Map Guidance + Prompt-to-Prompt

• Local and global editing (editing method: **Prompt-to-Prompt**)

"a young man standing in front of a building, smiling"

"a large elk standing on top of a lush green filed, oil painting"

Experiments

Noise Map Guidance + MasaCtrl

• Non-rigid editing (editing method: MasaCtrl)

"a woman with her eyes closed, frontal view"

"a small kitten is playing laying with a flower"

Experiments

Noise Map Guidance + pix2pix-zero

• Variations of DDIM inversion (editing method: pix2pix-zero)
